

Important technical information

There is an important update available for the following BC Jackets:

TUSA BCJ-6900 and TUSA BCJ-6910

This update contains a modification of the two rear dump valves of above mentioned items.

The new dump valves are wider as previous models, please see below picture.

We request owners of a BCJ-6900 or BCJ-6910 to check the dump valves currently installed on their BCJ.

If your BCJ doesn't have the latest modified version of dump valves installed, as shown in above picture, please contact your TUSA supplier for an update of your BCJ.

After Sales Department
Tabata Europe
